

# ENVIROZYME<sup>®</sup>

## Organic Material Digestion

Industrial Strength  
Highly Concentrated

Freedom Environmental<sup>®</sup>

## Usage

- Waste digesting
- Odour removal
- Organic stain removal (50% mix for use for spraying)
- Carpet / upholstery extraction prespray
- Drain maintenance
- Grease / urinal trap maintenance
- Holding tank additive
- Bathroom cleaner
- Water treatment plant (solids remediation)
- Garbage Chutes
- Garbage Bins
- Urine Stain Removal
- Kennel run maintenance (uric salt removal)

Our non pathogenic bacterial formula produces enzymes to liquefy its food source (organic waste). Free enzymes help to quicken this process. After liquefaction takes place, the bacteria can now absorb its food. The result is the production of water and carbon dioxide, by-products that don't pollute. As long as there exists both ambient temperature and organic waste, our bacteria will replicate and consume what is left. Envirozyme also contains a non-toxic odour counteractant to instantly eliminate odour on contact; it is also scented with our Spring Fresh Scent to enhance the odour control process.

## Why Enzymes?

APPLICATIONS	COMMON PROBLEMS	BENEFITS
Bathrooms; floors, walls, toilet, sinks, urinals	<ul style="list-style-type: none"><li>• Malodors</li><li>• Urine stains</li></ul>	Immediate and residual odour control. Penetrates into grouting and cracks to eliminate odour source. Stain removal. Chemical resistant.
Drains	<ul style="list-style-type: none"><li>• Malodors</li></ul>	Immediate and residual odour control. Chemical resistant.
Urinal Traps, Grease Traps	<ul style="list-style-type: none"><li>• Clogged piping</li><li>• Excessive pumping</li></ul>	Lower maintenance costs due to reduction of organic waste, grease and fats. Enzyme activity concentrates on problem areas. Reduces pumping. Chemical resistant.
Septic Tanks	<ul style="list-style-type: none"><li>• Malodors</li><li>• Clogged piping</li><li>• Plugged leach field</li></ul>	Immediate and residual odour control. Enhances biological activity levels for maximum waste degradation. Increase leach field life. Minimizes solid waste accumulations and consequent back ups. Chemical resistant.
Carpet Fabrics	<ul style="list-style-type: none"><li>• Malodors</li><li>• Stains</li></ul>	Immediate and residual odour control. Penetrates deep down into fibres and beyond to eliminate the source of stains and odours. Chemical resistant.
